11 Anexos

11.1 Dados Potenciométricos

Nesta parte da dissertação estão expostas as tabelas relativas aos dados das melhores titulações potenciométricas realizadas para os sistemas estudados.

Tabela A.1 - Titulação potenciométrica dos ligantes Pen, Cis, Hcis e Met, todos com a adição de 1,00mL de ácido 0,1000 mol.L⁻¹

Volume (mL) de base	pH- Penicilamina	pH- Cisteína	pH- Homocisteína	pH- Metionina
0,00	3,072	3,013	3,116	3,034
0,10	3,114	3,059	3,158	3,086
0,20	3,166	3,119	3,211	3,146
0,30	3,226	3,18	3,268	3,209
0,40	3,296	3,25	3,336	3,28
0,50	3,382	3,332	3,416	3,364
0,60	3,487	3,431	3,516	3,465
0,70	3,624	3,555	3,645	3,596
0,80	3,832	3,735	3,835	3,787
0,90	4,193	4,023	4,155	4,106
1,00	5,382	4,79	5,419	5,381
1,10	6,48	6,7	7,44	7,586
1,20	7,208	7,532	8,07	8,301
1,30	7,542	7,889	8,349	8,588
1,40	7,762	8,153	8,559	8,801
1,50	7,948	8,382	8,735	8,978
1,60	8,122	8,594	8,891	9,138
1,70	8,298	8,798	9,038	9,291
1,80	8,488	9,004	9,18	9,442
1,90	8,7	9,216	9,322	9,594
2,00	8,973	9,439	9,461	9,749
2,10	9,314	9,667	9,6	9,903
2,20	9,649	9,89	9,733	10,051
2,30	9,898	10,083	9,858	10,187
2,40	10,081	10,246	9,976	10,302
2,50	10,228	10,381	10,085	10,402
2,60	10,346	10,491	10,186	10,491
2,70	10,444	10,583	10,279	10,564
2,80	10,529	10,662	10,364	10,628
2,90	10,602	10,731	10,444	10,686
3,00	10,667	10,791	10,516	10,738

Tabela A.2 - Titulação potenciométrica dos sistemas Al:aa na proporção 1:1

Volume (mL) de base	pH- Al:Pen	pH- Al:Cis	pH- Al:Hcis	pH- Al:Met

OBS.: Entre colchetes [IR/Raman] estão as intensidades calculadas para o infravermelho (IR) em Km.mol^{-1} e as atividades calculadas para o Raman em A^4amu .

Entre parênteses em itálico estão presentes os números que representam os hidrogênios que participam dos modos vibracionais.

(a): Bandas de deconvolução.

Na coluna de atribuição aproximada, quando há parte dos modos vibracionais em negrito, isto representa que apenas estes se repetem no ligante e no complexo.

No Met experimental, em itálico, estão as os números de onda do espectro Raman do reagente no estado sólido.

Os cálculos do procedimento DFT e do conjunto de base B3LYP/6-311G foram multiplicados pelo fator de escala 0,9613.

11.2.2 Modos vibracionais dos espectros experimentais (Raman) e calculados (DFT: B3LYP/6-311G) do complexo $[\text{Al}(\text{Cis})(\text{H}_2\text{O})_4]^{2+}$ e do ligante cisteína

OBS.: Entre colchetes [IR/Raman] estão as intensidades calculadas para o IR em Km.mol^{-1} e as atividades calculadas para o Raman em A^4amu .

Entre parênteses em itálico estão presentes os números que representam os hidrogênios que participam dos modos vibracionais.

(a): Bandas de deconvolução.

Na coluna de atribuição aproximada, quando há parte dos modos vibracionais em negrito, isto significa que apenas estes se repetem no ligante e no complexo.

No Cis experimental, em itálico, estão as os números de onda do espectro Raman do reagente no estado sólido.

Os cálculos do procedimento DFT e do conjunto de base B3LYP/6-311G foram multiplicados pelo fator de escala 0,9613.

11.2.3 Modos vibracionais dos espectros experimentais (Raman) e calculados (DFT: B3LYP/6-311G) do complexo $[\text{Al}(\text{Hcis})(\text{H}_2\text{O})_4]^{2+}$ e do ligante homocisteína

Tabela A.7 – Atribuições aproximadas dos espectros experimentais (Raman) e calculados (DFT: B3LYP/6-311G) para o complexo $[\text{Al}(\text{Hcis})(\text{H}_2\text{O})_4]^{2+}$ (Solução aquosa) e para o ligante homocisteína (Solução aquosa e sólido)

OBS.: Entre colchetes [IR/Raman] estão as intensidades calculadas para o IR em Km.mol^{-1} e as atividades calculadas para o Raman em A^4amu .

Entre parênteses em *itálico* estão presentes os números que representam os hidrogênios que participam dos modos vibracionais.

(a): Bandas de deconvolução.

Na coluna de atribuição aproximada, quando há parte dos modos vibracionais em **negrito**, isto representa que apenas estes se repetem no ligante e no complexo.

No Hcis experimental, em *itálico*, estão as os números de onda do espectro Raman do reagente no estado sólido.

Os cálculos do procedimento DFT e do conjunto de base B3LYP/6-311G foram multiplicados pelo fator de escala 0,9613.

11.2.4 Modos vibracionais dos espectros experimentais (Raman) e calculados (DFT: B3LYP/6-311G) do complexo $\text{fac-[Al(Pen)(H}_2\text{O)}_3]^+$ e do ligante penicilamina

Tabela A.8 – Atribuições aproximadas dos espectros experimentais (Raman) e calculados (DFT: B3LYP/6-311G) para o complexo $[\text{Al(Pen)(H}_2\text{O)}_3]^+$ (Solução aquosa) e para o ligante penicilamina (Solução aquosa e sólido)

OBS.: Entre colchetes [IR/Raman] estão as intensidades calculadas para o IR em Km.mol^{-1} e as atividades calculadas para o Raman em A^4amu .

Entre parênteses em itálico estão presentes os números que representam os hidrogênios que participam dos modos vibracionais.

(a): Bandas de deconvolução.

Na coluna de atribuição aproximada, quando há parte dos modos vibracionais em **negrito**, isto representa que apenas estes se repetem no ligante e no complexo.

No ATP experimental, em *itálico*, estão as os números de onda do espectro Raman do reagente no estado sólido.

Os cálculos do procedimento DFT e do conjunto de base B3LYP/3-21G foram multiplicados pelo fator de escala 0,9613.

11.3 Dados Espectroscópicos (Segunda derivada dos espectros Raman dos complexos)

Figura A.1 – Segunda derivada do espectro Raman do sistema binário alumínio e metionina da região de 3500 a 2900 cm^{-1}

Figura A.2 – Segunda derivada do espectro Raman do sistema binário alumínio e metionina da região de 1700 a 100 cm^{-1}

Figura A.3 – Segunda derivada do espectro Raman do sistema binário alumínio e cisteína

Figura A.4 – Segunda derivada do espectro Raman do sistema binário alumínio e homocisteína

Figura A.5 – Segunda derivada do espectro Raman do sistema binário alumínio e penicilamina da região de 3500 a 2800 cm^{-1}

Figura A.6 – Segunda derivada do espectro Raman do sistema binário alumínio e penicilamina da região de 1700 a 100 cm^{-1}

Figura A.7 – Segunda derivada do espectro Raman do sistema binário alumínio e fosfocreatina da região de 3500 a 2900 cm^{-1}

Figura A.8 – Segunda derivada do espectro Raman do sistema binário alumínio e fosfocreatina da região de 1700 a 100 cm^{-1}

Figura A.9 – Segunda derivada do espectro Raman do sistema binário alumínio e adenosina 5'- trifosfato da região de 3500 a 2500 cm^{-1}

Figura A.10 – Segunda derivada do espectro Raman do sistema binário alumínio e adenosina 5'- trifosfato da região de 1800 a 100 cm^{-1}

11.4 Dados Espectroscópicos da Ressonância Magnética (RMN de ^{27}Al)
