## Anexo 1: Métrica para quantificação de incertezas associadas aos atributos sísmicos

Segundo Doyen et al. (2004), utiliza-se a métrica “erro relativo percentual” para definir as incertezas associadas aos atributos sísmicos. Por definição, um erro relativo percentual ( $ER\%$ ) associado a uma medida qualquer é dado por:

$$ER\% = \left| \frac{(V_r - V_m)}{V_r} \right| \times 100, \quad (90)$$

onde  $V_m$  corresponde ao valor medido, enquanto que  $V_r$  é o valor real.

Ou seja, diante de um valor medido e do “erro relativo percentual” associado à esta medição, entende-se que o valor verdadeiro encontra-se no intervalo:

$$\left[ \left( V_m - \frac{ER\%}{100\%} V_m \right), \left( V_m + \frac{ER\%}{100\%} V_m \right) \right]. \quad (91)$$

Nesta tese, as incertezas associadas a um atributo sísmico são definidas através de uma distribuição Gaussiana. O valor médio dessa distribuição é dado pelo valor medido, enquanto que o desvio padrão é dado pelo desvio padrão da distribuição Uniforme definida pelos erros relativos percentuais (pelo intervalo definido na equação (91)). Segundo a formulação do desvio padrão da distribuição Uniforme (Evans et al., 2000), obtém-se:

$$\sigma = \sqrt{\frac{(2(ER\%/100\%)V_m)^2}{12}}, \quad (92)$$

onde  $\sigma$  é o desvio padrão associado ao atributo estimado por inversão sísmica.

## 12

### Anexo 2: Amostras sintéticas

Os ensaios sintéticos utilizados para simular a calibração dos modelos de física de rochas (caso 1 e caso 2) são apresentados respectivamente pelas Tabelas 7 e 8. Nas Figuras 48 e 49, apresenta-se a eficácia da calibração para os casos 1 e 2.

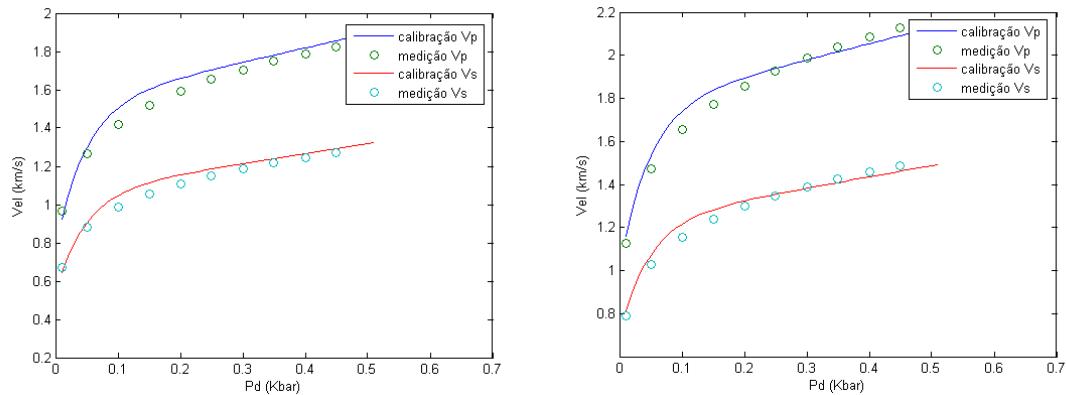

Figura 48. Ensaios sintéticos em amostras não consolidadas e análise da calibração. À esquerda, amostra 4:  $\phi = 0.201$  e  $C = 0.419$ . À direita, amostra 9:  $\phi = 0.175$   $C = 0.123$ .

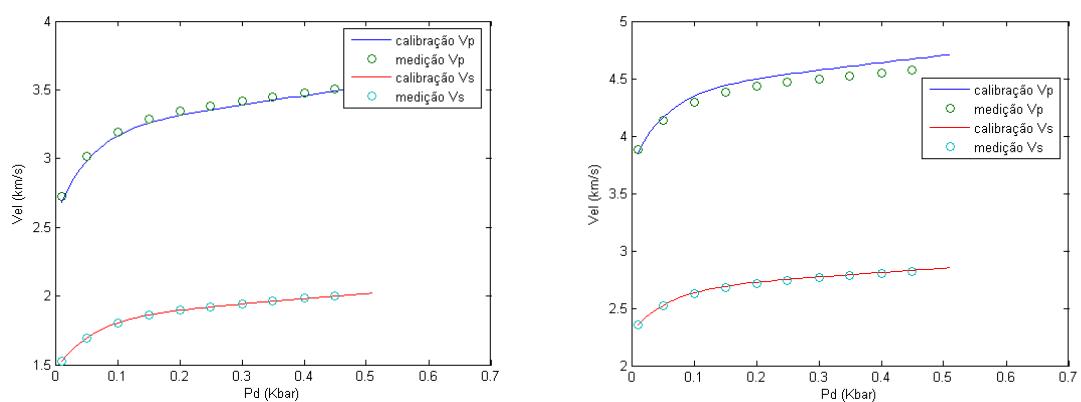

Figura 49. Ensaios sintéticos em amostras consolidadas e análise da calibração. À esquerda, amostra 2:  $\phi = 0.303$  e  $C = 0.211$ . À direita, amostra 13:  $\phi = 0.1347$   $C = 0.07$ .

Tabela 7. Ensaios sintéticos em amostras não consolidadas.

Amostra	Vp (Km/s)	Vs (Km/s)	Pd (Kbar)	C	$\phi$	Amostra	Vp (Km/s)	Vs (Km/s)	Pd (Kbar)	C	$\phi$
